

A. Santa Barbara Cal

Dear Sir.

Feb 28. '81 -

Send you a package of
Arizona furs herewith -
Please let me know what
you find in it -

Very truly
Mrs S. C. Bagg

WRITE THE ADDRESS ON THIS SIDE—THE MESSAGE ON THE OTHER

Mr. E. Daverport
No 8 Hamilton Place
Boston Mass.

Notes for Mr G. E. Davenport on ferns
received May 26 1880.

Cheilanthes 1, 2, 3 look to me just alike, & entirely correspond with Bigelow's white cliff creek plant, which is the Californian *C. pendleri* of Synopsis *Pilicum*. Some of Wright's 2426 new Mexican specimens look just like this, but others of them I cannot separate by any hard & sharp line from Mexican & Andine *Myriophyllum*. Compare the pinna of Wright's plant sent here with the frond from Ecuador, which is a fair average of *Myriophyllum*, as we understand it here. So that I don't think *Pendleri* can stand as a species & I should say that this Californian *collolepis* is the form of the plant that is furthest away from type *Myriophyllum*, *Pendleri* 1015 being a connecting link. No 4 is a new form to us, running off from type *Myriophyllum*, I should say, in the direction of *fragillina*, *Ortholaena paysoni*. Quite new to us, *Asplenium thezophyllum* & *Myriophyllum*. The two specimens excellently represent the two varieties, as understood in *Synopsis Pilicum*. *Ortholaena candida*. We had only an imperfect scrap of this Californian plant before, & followingournier we separate *Orelagea* from *candida*, this is the primer, we have Liebmann's type & these specimens

Match it very nearly. Wright 820 is
good for candida, typical. I think
at any rate they might reasonably be
regarded as two distinct varieties.
Chrysanthes Cooperi. A good supply of
this is very acceptable.

With kind regards

J. G. Baker

Keid, May 26. 1880.

Herbarium

July 5 1882

My dear Sir

Many thanks on
behalf of Herb. Nees for the
packet of ferns just received,
all of which were in excellent
order. I do not know that we
have any before from Unalak-
ka. I have been looking
through the covers & quite fail
to draw any definite line of
demarcation between *Horstholana*
rupea & *dealbata* & fear indeed
that *chilensis* & *Dendleri* are
not very good as species. I
have been much interested

in comparing the Hawaiian

Specimens & the following
is the best I can make of them.

No 1. A very distinct new
Asplenium next to normale.
The involucre is often so like that
of Marattia & Leucostegia that
Leucostegoides would be a good
name for it.

No 2 is I think a new Polypodium
allied to darciforme, but I
do not make out clearly whether
the specimen represents a whole
plant or only a portion. ^{this is very interesting.}

No 3 Polypodium & Phegopteris.
but I do not match the species
& cannot tell how much of the
plant the piece sent represents

No 4 I have no doubt is
Leptopodium rubiginosum Hook.

5 A large dipteropteroid Asplenium,
possibly Arnottii, but I am
not at all sure.

6 I have no doubt is Polypodium punctatum.

7 A new Polypodium of the
Phegopteris subgenus, but
the specimen scarcely complete
enough to describe from safely.

Pray tell your correspondent
to try to get better specimens,
especially of 2, 3 & 7. I expect
they will all three prove new
species.

With very kind regards to
Dr & Mrs Gray when you see
them

Yours very truly
J. G. Baker,

work, especially *Glora Indica*,
His son in law, Mr Threlton
Seymour takes his place as director
& Mr D Morris (of Jamaica) the
assistant directorate,

Please remember me very kindly
to Prof. Eaton, when you write &
also to Mr Pringle, who I am
glad to see is working so success-
fully in an entirely new groove.

Yours very truly
J. G. Baker

Jan 25 1886

My dear Sir

I have received safely
the packet of *Purplæ*. *Chibuchian*
ferns - many thanks for the same
I have compared with our spec-
imens. The following are the notes
I have made
Chelanthus leucopoda, new to herb
keg. Looks very distinct.
15 typical *Pellaea cordata* Sm., as
understood in Synopsis Filic. acm.,
P. cordata DC., being as you say,
P. paradoxa Hook.
Pellaea ternstroemia, aspera & *Peto-*
chlena *noveboracensis*. all three, quite
typical as understood here
Adiantum tricholepis DC
matches our type specimen
Purdie & Mann marked A.
chilense Hauff, var. *filosulcum* =

11 *Asplenium dichomanes* var.
repens Seavenant precisely matches
the type (*Galeotti* 6444) of *A.*
heterochroum, Kuhn in *Linnaea*
IX 67. It is kept up as a species
by Moore & Doumer.

4 Agrees exactly with Liebmans
type of *oxacea* (See scrap enclosed)

12 Desite agrees with type received
from Martens & Galeotti marked
ex *Cheilanthes candida*.

5 I entirely agree with you about
Parry & Palmer's 1382, 1382³, ^{this} lie now,
mounted on one sheet, in the cover
at the end of genus, marked n. sp.
It is quite distinct from *C.*
chilensis, of which there is a good
figure in Hooker's *Species Filicum*.
My name Palmeri has not been
published, so need not stand
in your way.

6. This is the typical *Psilotum*
complanatum Spring. We unite
with it *P. flaccidum*, Wall., for
which the name *complanatum*
would be much more appropriate.

We are going to have a volume
of the *Icones Plantarum* entirely
devoted to ferns, so that will give
us the opportunity of figuring
100 or the more interesting or
little-known species. Unfortunately
the artist has had no experience
in drawing ferns, so that it is
slow work at the beginning & dif-
ficult to teach him to do justice
to the things that are important
botanically.

You know probably that
Sir J. D. Hooker has resigned his
official at Kew in order to devote
himself completely to scientific

Ourst set of *Purpureus* ferns has not yet
come. Both 448 & 461 are ~~excluded~~
under *Pellaea cordata* as understood
in Synopsis *Pilicium*. 461 is ~~excluded~~
type. The other matches a ~~head~~ ^{head} ~~traycan~~
plant from Rusby & one of the ~~specimens~~
included under *C. Wrightii* 825. Mandons
1554 has the same non cordate sori &
a flexuose axis. I think it ought to have a
name as a distinct variety. Hempley is just
printing off his supplement. I have asked
him to insert 991 as ^{C441? 9. 200} *P. Pringlei* Davenport, D.S., as I
think the other (*Palmeri*) is good I.E.B.

Dear Sir
I have not access at present
to the two Mexican forest tree
plants after being taken, have
sought to be given to after being dried
one classified once each quarter
of a year. The name Polypodium
heterolobum was written as one
of the papers in which the specimen
was wrapped. I did not recognize
the plant. It was not in print.

George A. Davenport, Esq

Dear Sir,

I have nearly
ready for the Press, a sort of Comparative
List showing the range of the Orchids
found in Mass., but have found it
difficult to get Stations in Worcester,
Middlesex, Norfolk + Bristol Cos., so far
botanists have given attention to Orchids.
Several correspondents have referred me
to you, and if you ever take time
to send me Stations in any or all of
these Counties (my aim is to have the
Stations scattered, of course) I shall be
exceedingly obliged to you. With the
exception of Trenton & Cambridge, the
immediate vicinity of Boston is not
represented on my List. If you ever
collected Orchids in New Hampshire
or Maine, I should be glad to
get Stations in those States, but do
not want to impose on your good
nature. An early answer will
oblige.

Yours very truly

Henry Baldwin

Yonkers Oct 19.th 1875

Mr. Davenport

Dear Sir

I hasten to acknowledge the receipt of your letter, and beautiful and rare fern specimens, and for which please accept my kindest thanks. I was perfectly delighted with them, and the generous number, and while I think of it, in your two last letters, you write as though you had sent some before. This is the only package I have received, and if you have sent one previously, I may be able to trace it if it came here. If not too much trouble, please write me, I have some larger and finer specimens of *Polophridium*, and two very odd ones, if you care

I will send you, some (morning I
sent them, I left the city on an early
train, so had not time to look them
over. When I have some oddly divided
sphenocleus, can send you one or
two of those, also odd shaped and
very fine specimens *Acrostochites*
var incisum, odd shaped *Polypodium*,
and a variety of *Brychium Lunari-*
oides incisum &c. which I have gathered
lately at Oneida. Much to my astonish-
ment I found a few *Ophioglossum*
growing there, also a very peculiar
Asplenium Poly Ethelystroides
any of these would be glad to send
if you care for them. I am very
fond of these oddly shaped ones.
Again thanking you for your kindness
I remain

Yours sincerely
Mrs Dr Barnes
41 Green St

1
Ogdensburg March 4th 1876
Mr Deavenport

Dear Sir

I write to acknowledge the receipt of two papers from you, with the very interesting article upon ferns. I have enjoyed it very much thus far, and if not asking too much, I should be pleased to receive the rest as it is published. I enjoyed the last ferns you sent. In the letter which accompanied them, you asked for some in return. During my sickness the letter has been mislaid, if you will write

me again, I will look for those
you wish, and hope I shall
have them for you.

Yours very truly
Wm L. Barnes

P.S.

I have mounted my specimens of *Matricariaefolium*,
and they all vary so much.
I should be glad for you to
see them, and would send
them for your inspection, if
you cared to have one.

C
Oyoacuse March 24th 1876
Mr Davenport

Dear Sir

I received your letter day before yesterday, have not answered sooner, as I did not have time to look over my ferns. I am extremely thankful for the ferns you sent, they are lovely little ones, and feel all the more obliged, as they are so rare. My collection is now up to 98. I hope some time I shall be able to complete it.

I send you today a package of ferns, not all I would like to send. but as there are several

People I have written to
lately, I must wait until I
hear from them before making
my duplicates too short.

Elk scelopendrium is from
Green Lake, Jamesville Sep. 185
Cellar. Jamesville road.

A. acrostocoides. Meica.

B. matricariaefolium Montfresdyi
Gulf. *C. dryopteris*. Jamesville road
I will send my *B. matricariaefolium*

as soon as I can mount a few more
for your inspection. Any thing
more you may wish, please send
for, you have been so generous
to me & shall, that I shall always
be glad to send you specimens.
Many thanks for the other paper
Yours sincerely
Gale S. Barnes

Syracuse June 21st 1877

Dear Sir

I have finally found time to put you up a few more ferns. and hope you have not lost all patience, waiting for them. I was sick a long time this Spring, and felt miserable to look a ferns. I have a nice lot in press now but do not know as you will care for any of them. Will send you a list of what I have in the Hall. I shall go up into the North Woods, in about 3 weeks to spend the Summer, will get you more *Terrestrial*, and *Ophioglossum* etc. Please tell me what you think of the ~~as~~ old specimens of

Spiculorum? I found a great
many of them! Also Please tell
me what the two *Spiculorum*
that are alone are, are they
Boottii? Are not the little
Botrychiums are cunning?
Please tell me what the fern
is that looks like *Marginalis*?
The fructification is not on
the margin. I have two
roots, if you care for one
I could send it to you.

Yours very sincerely
Estate J. W. Barnes

P.S. I am afraid I gave
the best *Phlegopteris calcarum*
to Mrs. Rust.

Stentors. 1801. Aug 5th 77

Dear Sir,

I send you a few
roots of *B. simplex* by to-days
mail, and hope they will reach
you safely. I wish they were
all nice and green, but they
may come up another year.

You will have to use care in
unbuckling them, as they are
so small and withered. Those
that I sent you that were entire
are as large as any I found.
If I come here another year,
are they sufficiently rare to pay
me for coming earlier?
Thanks for the card board, it
did not come till last night
and as a beam was going out yes

Yesterday. now I did not know
when another would go, I thought
I would not wait, so I sent you
a package yesterday. I hope
I shall find more to send you
but they are very scarce.
In haste

Yours respectfully
Edw. Barnes

Start
write to
me when
you receive
them

14 August 1877
Dear Sir -

I found I had time
to do up my ferns hurriedly,
and thought I had better send
them: the *B. Arvensis* I put
in as I have never seen a
sterile frond fruited before
and thought and thought
possibly you might not have
I found the simplest growing
in an other old pasture, and
think if I had come earlier
I might have found a hundred,
but they were all withered up
as they are more exposed, please
keep this to yourself, for if I
come another year. I should like the
pleasure of gathering them
Yrs. Wm. C. Barnes

No 1 Sep 3^d 1847

Dear Sir,

I would rather have
you keep my ferns until I
return home, and if there
happen to be duplicates of
any that you should desire
for your own collection
you may keep them. I found
a few more after I sent yours.
What you wrote about the for-
mation of the bud, I had al-
ready discovered for myself. but
did not understand the meaning
of it, supposed it was another
plant for this year. I found
the stem of one apparently much
swollen, and opened it to find
the cause, and then I found a
perfect plant, both stipes and per

file, as perfect as could be,
I meant to have written to you
about it at the time, but did not
get the time. I was delighted after
you wrote, to think I had seen
so fine a specimen, then I found
another after you wrote, and exam-
ined that too, so with many thanks
to you, I understand the growth
of *Polytrichum* perfectly. I found
another little place where they grow.
so I think if I come another year
I shall find a nice lot. I wish
I could have found them earlier
this year, in most cases they were
all withered up, those I found
were protected by the tall grass.
and I sent you last Monday a
box of *B. ternatum*, have you
received them? I shall send
you some pressed ones when I
get home. I am glad if I
have been of any service to

you, and hope I may be
able to do more for you,
as I feel under great obliga-
tions to you, for not only for
a generous supply of specimens,
but for the many words of
encouragement you have
given me, as well as much in-
formation. If you have not sent
any flans to Prof. Eaton, I should
like the pleasure of doing so,
as he was very kind to me when
I first commenced collecting.
I feel very grateful to all who
helped me at first, I had so
little to send in return.

Please excuse all my poor
writing done here. I have no
facilities for writing

Yours sincerely
W. Bate Barnes

I will send all the Botrychia
I have for you as soon as I hear
from you. I wish they were better
this year. Have you commenced
your paper upon *B. matricariae*
lium?

Yours respectfully
Cate A. Barnes.

18
Hyracuse Jan 22nd
Dear Sir

The second Bo-
of the (forms of *B. A.*) came
on Saturday, and I was de-
lighted to see *B. boreale* in
it, as I have been anxious for
a long time to know how it
looked, as it is the only Botrych-
ium I lack. It looked so familiar
to me, that I felt that I must
have gathered it something sim-
ilar to it among my Botrychiums.
In looking over my *B. matricariae*
foliolum, I found some resembling
it in a measure, and I would
like to send them for you to
examine, & for so many curious
ones, that I should like to send

show all to you, and you may
keep part if you wish. They may
aid you a little in your work.
I must say the *Botrychium* have
always had a peculiar fascination
for me, and since your valuable
articles upon them, I feel more
interested in them than ever.

I am eager to get up to No. 1,
again. I feel sure that if I go
earlier, I shall find much to
occupy me, and I feel as though
I may find something new. I
even feel encouraged to look
for *B. boreale*, if it has been found
once in this country, why may
we not hope to find it again?
If I go I shall certainly look
with great perseverance and
also for *B. lunaria*. I live in
hopes to find these two and then
I shall have found all the
Botrychia.

C

Dear Mr. [illegible]

[illegible]

I have been thinking of you
very much the morning since
then I have been thinking of
you a great deal and that I should
like to hear from you and
if you can write me a line
it would be very kind of you
and I would be very glad to hear
from you. I am very
kindly yours
[illegible]

Yours faithfully

[illegible]

My dear Mr. Garrison

I have just received your letter of the 11th inst.

and am glad to hear that you are so interested in the cause.

I am sure that your efforts will be successful.

I am very much interested in the cause of the colored people.

I am sure that your efforts will be successful.

I am very much interested in the cause of the colored people.

Handwritten text on the right page, mostly illegible due to fading. A large, faint letter 'C' is visible at the top of the page.

[The page contains extremely faint, illegible handwriting, likely bleed-through from the reverse side. The text is organized into several paragraphs, with some lines appearing as distinct sentences. Due to the low contrast, specific words and punctuation cannot be transcribed.]

Syracuse Jan 23^d / 79
Dear Sir

I am sorry that I
have not been able to answer
your letter sooner, but I have had
a very sick baby and he has taken
all of my time. I am so sorry that
you are discouraged about your
catalogue, why not put the
price up to \$1.75 etc? I have spoken
to Miss Williams, Mrs Fairbanks, Mrs
Prest, Mrs Gifford & Mrs Myers. we
will all gladly pay that price.
At our Club meeting I tried to get
Mrs Myers to wait till she heard
from you again before stating the
price at all, but she was so anxious
to get subscribers, that she wanted
to do it right away, and she told me

yesterday that she had sent you
20 names. I am so glad and hope
she will get 20 more. But those 20
people would just as soon have paid
1/2 etc. She is just the one to get
subscribers for she does not care
who she asks. I think your idea of
calling it a Hand-book, a good one,
and think, with you it would be
better. I am sure all botanists would
want it then. I had a letter from
Mr Schockley this week. He seemed
much pleased with what I sent him,
and has promised to send me *Pteris*
fratilis, but am sorry to say that he
says his *Adiantum microphyllum* has given
out. I hope before long to find time
to make exchanges again. Wish it as
much and the pleasant correspondence
it brings. Besides I want to make my
list complete if I can. Please tell me
if you have heard from Dr Garber

this winter. I was in hopes to hear
from him but have not thus far.
Will you please tell me from whom
you received your *Botrychium boreale*?
I am soon to hear that your
catalogue is a success.

I am yours respectfully
Kate S. Garber

8

June 1, 1861

Dear Mother

I have just received your letter of the 28th and was glad to hear from you. I am well and hope these few lines will find you the same. I have not much news to write at present. I am still in the city and have not yet had time to go to the country. I have been very busy with my studies and with the preparations for the coming year. I have also been thinking much of late about the future and about the duties which are laid upon me. I feel that I must strive to be worthy of the trust which is placed in me and to be able to do the will of God in all things. I have also been thinking of the dear friends who are scattered all over the world and of the love which binds them together. I hope that you are all well and happy and that you are all doing the will of God. I have not much more to write at present. I must close for this time. I will write again soon. I am, dear Mother, ever your affectionate son, John Smith.

Yours truly, John Smith

I presume Mch. 22nd
Dear Sir

I hope ere this
that your eyes are well again.
You were so crippled in my
eyes since I recovered, that
I am not able to use them long
at a time. Let the window fall
or bath it shrouded my left-
hand across badly, landed my
right. I. I. with it were summer
for as I cannot do anything I
could be out botanizing all the
time. I went from Saturday
am to reach your paper on
bud forms ^{of the *Myrica*} before the Club. I
have a little opportunity to gather
something each year. But I am

Dear Sir
Cincinnati, Mich. 29th & 30

I wrote you last-
week, but directed my letter to
you, it is since I was
in it read your paper on
the subject of the Botrychium.

you were wanting your
her I thought you might
ive a number of specimens.
If you have any of them that
we have not mounted and
do not care for, I wish you
would send me a few. I have
B. Virginianum. & *madecassae* fo-
m. Could you send them as
early as convenient, as I read the
paper on Saturday. Yours respec-
tly Mrs Barnes

Syracuse April 1st
Dear Sir

The Botrychium
came yesterday, and I feel
under many obligations for
the loan of them. I should
never have asked for that set,
I thought you might have
duplicated, and would be will-
ing to loan them. I shall take
extra care of them and
return them early. The heads
of fernatum and virginianum
were broken off in coming. /
The others came safe. I
will pack them more securely
in sending back. Mrs B.

No 1. Bury 21st "
Dear Sir

I received your letter
long ago, and am ashamed of
myself for not answering it
sooner, but the truth of the
matter is, I am too lazy for
anything. It has been unusually
warm here, and all com-
plaints of feeling so languid,
and sleepy. Of course I am
not a great deal, but went
it comes to writing, it has seemed
such a task. I think of the
weather changes. I shall have
a little more life. I search
religiously for the Balm of Gilead
you desired, but there was hardly
a vestige of it.

Then I had a long tramp of
2 or 3 miles, where I had gathered
them before, and then I found
a few that were as good as
if the tail feathers had come
off the wing. I had
some more in pressing, but
I think the new forms are
perfect, and I suppose that
is all you wish. I am very sorry
but have seen the best I could.
(My horse was so blistered from
digging them that I could not
ride for a week. They now dig
so many fishes and birds, that
it is almost impossible to dig
at all. and many I broke off
in trying to dig. They had been
late frosts here, and that with
the extreme dry weather, seems
to have killed them. If I could
only come once in June, then
for I have seen but few

B. ternatus, but then I have
not looked particularly for them.
As I intend to stay here
through September, I thought
there would be plenty of time
to gather them.

We are going tomorrow
farther in the woods, to camp
out for a week, expect a very
pleasant time
Hoping a hear from you
soon. (again)

Yours sincerely,
G. A. S. Barnes

George E. Sampson, Esq.
Boston -

Dear Sir: -

According to promise
made you in Boston - I have
inquired concerning the Williamsen
few etchings - Mr. Junett
Memfen, who was Mr. Williamsen's
executor, died several years ago
& Mrs. Memfen - his widow - told
me that all the etchings were
sold separately and are most
of them owned by private cit-
izens in this town - I know
the whereabouts of four or five
but feel sure that, may be with

Mrs. J. B. Bartlett
Winthrop Highlands
101 Cliff Ave.

Thank you for the
book. I have been
looking for one like this.

Mr George E. Leavensworth
Medford Mass

By Sir, your
very kind note indicating our
interest in Terms came today.
Since my enquiry at your
Boston office we are informed
by the family here that they have
taken apartments in Boston
and wish to leave the 20th inst.
This will necessitate my
removal also and with the
expectation of creating in
Boston

think it would give you
less inconvenience to
defer until we can arrange
some convenient time then
to examine the specimen
of doubtful name.

Trusting this may be in
the near future and.

Thanking you for so
cordial offer of assistance
I remain Yours Respectfully
Julius B. Bartlett.

Winthrop Highlands

September the Eleventh -

Winter School & Fine

from England, and possibly you may think that it has in some way been brought here through some one of these persons. I intend when summer comes to institute a thorough search, with the help of some boys who belong to our Botany Club, throughout the field where I found this fern, to ascertain whether there is another, and if we find another, or several more, I will inform you. The field has been traversed a great deal by myself and by others observant and interested, and I should not be surprised if we do not find any more. I have only a very poor specimen left of the little fern, I am sorry that I can not enclose to you a better one.

The attention of the boys belonging to the Botany Club, and consequently

St. Paul's School, Concord, N.H.
April 14-1882

Mrs. Geo. E. Davenport,

Dear Sir,

I am happy to reply to your letter of inquiry respecting the little fern which I found last summer. I caught sight of it one morning last July, as I was crossing a rocky pasture near the School, and instantly saw that it was a fern that I had never seen before. I took it up carefully with my hands and brought it home & put it in a little pot and one of the ladies very kindly cared for it until I sent it

to Prof. Gray. It grew very well in the little spot, but remained quite small. The spot where I found it was a steep hillside running down from the highway to the School pond, very rocky & with the lower part quite heavily wooded. This little plant grew just above the upper edge of the woods, in the open pasture, but under the shadow of the woods. There were a good many other low ferns about it. I was very busy at the time, but a little later I looked very carefully through that part of the field, but could find no other specimen of it. and I have as yet found no one in this region

who has seen one like it. I think no one here at the School or in this vicinity can ever have had this variety in cultivation. The few house plants kept here scarcely ever include any ferns, and such as there are, have been the maidenhair or some other showy variety. I showed this little plant to Mr. Main, the principal owner of greenhouses in Concord, which is two miles distant, and he had never seen any plant like it. I know of no one in this region of country who has a large collection of ferns, or any but a few of the more showy varieties. We occasionally have visitors at the School who have just returned

the interest of the two or three of
our older persons who are interested
in Botany, is especially directed
now toward ferns, on account of
a prize which has been offered
to be awarded this year to the
boy who has the best collection
of ferns from this region. I pre-
sume that, in two or three years
time the vicinity of the school
will everywhere have been pretty
carefully examined to find all
possible varieties. Up to this time
flowering plants ^{specifically} have claimed the
attention of all interested in Botany
at the school. As we go on I may
be very glad to accept your kind
offer of specimens, in favor of

our Botany Club Herbarium,
and to ask you for information,
I shall feel honored in receiv-
ing any further communication
from you, and shall be only
too happy if I can give you
any further information in
response to inquiries.

Truly Yours.
Wm. H. Bates.

C
S. Pauls School, Concord, N. H.
April 30th 1882
Mr. Geo. E. Davenport,

Dear Sir,

Allow me to
thank you for the copy of
your Fern Catalogue, received
by mail some time since. It is
very valuable and useful to me.
I have today found in a low
meadow about half a mile from
the School a single frond, of
last year's growth, of the *Lygodium*
spalmatum. I know that this
is a rare fern, and I take
pleasure in reporting to you the
discovery of a specimen of it here.
This little frond is about seven

inches in height, and has seven
pairs of frondlets. I have not
had time to fully explore the
field to see whether there may
be more of it. But there was
no more within sight of this.
Unfortunately the meadow has been
mowed every year, and thus
doubtless its growth has been
very much injured. I shall
watch carefully for the appearance
of new fronds + shall protect
them from the scythe of the farmer.
I see by Prof. Hitchcock's Geology
of N.H. that it is reported found
at Hudson, N.H. but it is not
accredited to N.H. at all by
yourself, or by Prof. Eaton or Prof.
Gray. Will you kindly tell
me whether N.H. ought to be

mentioned among the localities mentioned above
as no frond, and also, from your study,
from H. Bates

1
St. Paul's School, Concord, N. H.

Sept. 30 ~ 1882

My Dear Mr. Davenport,

It is rather late to acknowledge the receipt of the August number of the Torrey Club Bulletin, which you so kindly sent me, with your notice of my two little discoveries. I am very much obliged to you indeed for remembering me. I have not been able to find a trace this year of the *Lycopodium*, nor can I find another specimen of the *Filix-foemina crispum*. Possibly they may appear next year. I think I mentioned to you that I had found one specimen of

perhaps the *Aspidium densum*, I presume
the latter. I was surprised to find that the
hardiest species we have. It does not look as
hardy down here in the valleys.

Botrychium lanceolatum in
August. I have found nothing
else which seems to me to be of
interest. The *Botrychium*
terminatum, varieties *obliquum* and
dissectum are abundant here and
quite large & fine, the *obliquum*
is very abundant.

With thanks for your kindness.

I am,

Truly Yours,

Wm. H. Bates,

When on Mt. Moosilauke this
summer, I observed that at the
summit & for a considerable distance
down the mountain, but one species
of fern was to be seen, and
that was very abundant. It
was the *Aspidium spinulosum*

H

28 Commonwealth Ave.

October 16th 1901.

George E. Davenport Esq.

My dear Sir; -

My mother
brought to me yesterday the beautiful
letter written by Dr.
Gray, which you were
so kind as to send.
It will always be

one of the greatest
treasures of my auto-
graph collection, and
I shall place it
opposite one of Darwin
of which I am the
fortunate possessor.

Your generosity in
parting with so fine
a letter, from your great
and noble friend, when
every scrap of his writing
must be so precious to you,

is deeply appreciated, and I
thank you most heartily.

May I send the best of
wishes, in which Mr. Bead
joins, for the success of your
great work? My brother has
told us of its vast scope and
extent, and we all hope that
you may bring it to a triumphant
conclusion. Thanking you again,
I am
Very truly yours

(Mrs. H. H. A. Beach.)

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Gen. E. Ravenholt,
Medford,

Massachusetts.

Bathymetris, 9 13 1/2, only 15-
car Sir - I have some great
variations in Pteris aquilina,
in outlines & contractions of
segment^{the}. I gathered some
yesterday which were black
with the feathered side, this
may be familiar to you, but
I can send primules if you
wish, Yesterday I also gathered
over, Protholva ^{intensely white} of C. cinamomum.
It has been very curious this
year. But fine specimens of
Protholva ^{Protholva} ^{Protholva} ^{Protholva}
very odd in their contraction &
induration. Some a tenth pound
of C. cinamomum have been
greatly contracted, & on one
there were one or two further
primae at the base, Pteris
aquilina has been so variable &
contracted that I suspect either
fungus or insect causes, On Wed
I added Woodia blanda to our
Pong list of Woodia blanda. It
occurred in the very summit
of a hill 1,000 feet above the
surface. There some per the seed of
Island X. over the island,
Island blanda blanda blanda blanda

Providence R.I. Apr 3rd 1877

My dear Sir.

I am just in rec^t of your
fav^r of 2^d inst and hasten to reply
that I send by this mail a small
spec of *Asplenium dentatum* L. as desired
- I wish I had more of it for you -
- the *Rheopteris calcearia* (Sm) FÉE or as
I have it in my list (*Polypodium*) is
from Europe - I have not an American
specimen altho I have collected it in
Rhode Island and even in the limits of
our own city -

the *Asplenium* - is from Wright
Cuban collection.

I have perhaps two species of
Fern. quite a number of the *Horop*
ones in duplicate and it may be that
we each have some which it would be
pleasing to the other to receive; -

think favorably of the matter I will send
you my list -

I am sorry that I have not the
other of the desiderata marked, but am
glad that I can send you even the scanty
spec I do -

The ~~Polyph~~ Pheoprotein I send in paste
board by newspaper mail - be a little
careful in opening it as the paper is pasted
and the stripe sewed down - I had
no spec. with Candlex.

Yours respec

James L. G. ...

Princeton N.J. Apr 7 1877

My dear Sir.

I am glad to learn from your
Card that you rec^d the ferns and were pleased -
- Some years since I found three fronds
of what I took to be *P. Dryopteris* - at
the time I collected them. But afterwards found
them to agree in their ^{leaves} erect rigid, and pubescent
with - *P. calcarea*, Sm - - I afterwards found
in N. Hampshire in the woods near the Plume
House in Franconia notch a single frond of
this description whilst all around was nothing
but *P. Dryopteris* - - to be sure there were
Yucca I cannot remember, nor can I recollect
that I have given them to any one -

I have frequently searched in the same locality
where I found the first three, which was on the
banks of the Blackstone River and within our city
limits, but have not found it again - so that
the matter much needs somewhat in doubt, and

Yours truly,

L. L. Bennett

Providence Apr 18-1877

My dear Sir -

Your last note is before me and reminds me that I have been a long time answering it - but I have been very busy with matters that claimed my immediate attention -

Botrychium boreale - I have not known not - - simpler I have but little of - don't know them very well any how, than *Botrychium* - - we have *virginicum* - *lunarioides* (in great variety as to the latter) - and I always look when not for *Lunaria* for it seems to me that we shall find it here some time -

I send you 4 to days before all the B. simpler which I have - - it may please you to see them - I wish I could give them to you, but as it is - please do not scruple to divide the specimen if necessary

How be please. I hope you may receive
and return them to me at your convenience
- the nice note that the only American
found in from Dr. Tany -

Yours truly
J. L. Duncanson

if the Sunday is of any interest to you
please keep it - I sent off a parcel
off from yesterday and that was by accident
left out -

Berkeley Apr 30th 1877

My dear Sir,

I recd a day or two since
a new scrap of a fern from California
(gathered last month by Mrs Austin in
Quincy Plumas Co) - I placed it
with *Aspid. minutum* Kaulf - and Prof
 Eaton corroborates my view - by stating - "it
is a form of *minutum* analogous to var
micrum of *Aspid. acrostichoides*" -

I thought that altho' of scarcely any worth
it might be interesting to you to see it

as showing the disposition to vary,
from the normal form -

Holding such prejudices as I do
in the matter of species and varieties, any
such exhibition of a spook is doubly in-
teresting to me as ~~being~~ ^{seeming to}
strengthen what I already feel with regard
to the relation of species - so called - to one another,
- to wit, that there are especially in ferns,
two or three times as many noted by authors
as there are -

Yours very truly
J. L. Carruth

EDNA L. HYATT, Botanical Artist

LINCOLN, NEBRASKA, U. S. A.,

July 13 1898

Gro E. Davenport
Newport, Mass.

My dear Sir:

Upon separate cover I send a few badly pressed forms of Adiantum capillus-veneris L. collected ^{at} Casper in the Black Hills of South Dakota! They were collected by a friend who says that "they grow abundantly all along the stream", and that she "manages to get a bunch every summer".

I supposed that some mistake had been made, and so wrote to her asking in particular about it, and she says that there is no mistake about it at all.

Now these specimens are certainly A. capillus-veneris, but who ever heard of it growing that far north in the interior? I have a specimen from the U. S. National Museum from Wheelock, which is the same thing.

I intend to visit the station

in person. if you think it of
enough importance.

That Black Hills country is
quite a serious war. and this
but confirms it.

Then you have all the facts.
What do you think of the case.
It seems almost incredible. and
I still feel "shaky" over it. but
cannot see any way out of the
matter. Awaiting your early reply

U.S.A.

Aug 22/78

Dear Sir

Your favour came duly to hand & in reply thereto we beg to say that we shall be glad to receive from you such Ferns as are herein mentioned & which you enumerate in your note as being able to supply.

We have procured our supply for some years from a Gentleman who has supplied us very satisfactorily - As a number which he has sent us however are either not in his district or only in limited quantities, he has had to charge us rather higher prices than those we append to our list - As we wish to buy as cheap as possible consistent with good stuff, & seeing those you

Ferns desired

- 50 *Aspidium cristatum* @ 12/6 per hundred
50 — " — — *Clintonianum* @ 16/8 per h —
* 100 — " — — *Novboracensa* @ 12/6 —
* 100 *Dennstaedtia punctilobula* @ 8/4 —
* 100 *Phegopteris hexagonopterum* @ 12/6 —
* 100 *Aspidium acrostichoides* @ 12/6 —
50 *Woodsia obtusa* @ 16/8 per 100 —
* 100 *Woodwardia angustifolia* at 16/8 —
* 50 — — — *Virginica* at 12/6 —
* 100 *Aspidium marginatum* @ 12/6 — * These should be
medium sized crowns & smaller - not very large ones, but
the other sorts as good as possible

Should the above prices be satisfactory, the plants
could be sent off in the fall - packed carefully
in barrells, & kept each variety separate

we have been guided entirely
by prices we have previously
paid & often we have in
hand from several who
collect the Native plants of
America. Should you find
when you have collected &
sent off the plants, that you
are unable to supply any
of the varieties at the prices
we offered, you will be able
to quote the prices (the lowest please)
at which you would undertake
to supply them - & also whether
you can send any other sorts
than those previously named.

We are Dear Sir
Yours very truly

H Plainville Conn Feb 7th 1896
Prof. Geo. E. Sauerport
Medford Mass. 1

My Dear Sir

You will see by enclosed circular letter what I am about.

Can you give me names and stations of the rarer Ferns and their Allies in this state?

Full credit will be given for any assistance received —

A correspondent from Waterbury has just sent me stations Waterbury and Lakewood this state for Asplenium viride can it be possible this is found in this state?

I have written him doubting his determination and requesting specimens —
Am trying to get track of Botrychium Lunaria in this state —

Yours etc —
James M Bishop —

Can you give station in this other than New Haven for Woodwardia angustifolia?

4
Plainville Conn. Feb 17th 1876
Mr. George E. Sanborn
Medford Mass.

My Dear Sir

Your valued favor of 14th
reached me today — thanks for your stations
of *Batrachium Lemaria* they are the only
definite ones I have! In regard to *Asplenium*
viride my correspondent has since written
me he only intended to give Waterbury as
station and could not furnish me with specimen
but would try and get some the coming
season — I suspect he mistook *rupestris muraria* or
montanum for it — unfortunately I have
not complete file of *Barb's* Bulletin should
very much like to insert the species in list
if it actually occurs! You ask if I have
record of *Asplenium ebenoides*? the only one
I have is one plant found in Carson 1877
by J. S. Adams. Have you further
stations or information?

Have got to have copy ready about Mar 1st
so you see time is precious If you can help
me on *viride* and *ebenoides* shall appreciate
it — will send you copy when issued
Hostily, with esteem and regard
James N. Bishop-

C Plainville Conn. Sept 17th 1896

Dear Mr. Sauerbort

I send under separate cover with this five ferns will you kindly look them over # 4 & 5 I make out *Asplenium thelypteris* and # 6 ~~flexiforme~~ as I right?

The others are all I think varieties of *D. cristata* but am puzzled as to what the varieties are — do not trouble to return them only their names corresponding to the numbers — thanking you for your kindness in advance I am most truly
James N. Bishop

- 4. *A. Thelypteris* yes
- 5. " *filixfoemina* "
- 3. *D. cristatum*
- 2. " var. *Clintonianum*
- 1. *A. Bootii*

Mr. Geo. E. Danvers

8 Hamilton Place

To the Botanists of Connecticut.

The author of this letter is about to publish a supplementary sheet to the catalogue of state plants published in 1885, giving all the corrections and additions to that list that have been discovered the past season. At the close of each season it is proposed to publish a record of the years work thus keeping the working Botanists of the state in touch with the latest knowledge of our state flora, without having to wait years, perhaps, before a revision of the catalogue should become necessary or desirable. It is with this end in view your aid is requested. Full credit will be given for contributed information. As this "rectograph" letter is mailed to all correspondents those who have already sent lists are not expected to do so again. Most truly James N. Bishop

My Dear Mr. Townsend

I send under separate cover a species of *Dyopteris* which I am uncertain whether it is *Boottii* or not kindly give me your decision which with me will be final! Thanking you in advance for your kindness I am most truly

James N. Bishop

Spinulosum-intermedium

form with pinnæ more erect than usual

C Plainville Conn. July 13th / 900

Dear Mr. Lauenfort

I take the liberty to mail you a package of ferns sent me by Mr. E. H. Austin to name for him — I wrote him I considered them to be Dryopteris spinulosa var intermedia

He has sent them to Mr. B. S. Gilbert of Clayville N. Y. who pronounces them to be Dryopteris dilatata glandulosa

and remarks the one with "odd pinna at the base while not constant is a feature which may prove valuable in distinguishing the variety."

I feel very desirous of knowing just what variety it is and enclose stamps for their return.

I hope you are enjoying good health and thanking you in advance for your kindness I remain

Most truly James N. Bishop
